Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila denome broject (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Googgawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1066 TITCAGGGCCAAATTATGATAAATTAAAACTGAACTTAAGAACCAAGAGATGGCAACTT 1125

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophia Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophia melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophia melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EoRI digestion of Drosophia DNA provided by the BDGP from the EoRI digestion of Drosophia DNA provided by the BDGP from the EoRI digestion of the Sp. the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TICATCATCITCACITITICGIGGIAACACAIAAICAAAIAICITICCGITITITACG 535

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mutant SPE-A toxin with at least one amino acid change is substantially non-lethal - used in vaccine composition for treatment of cancer and streptococcal toxic shock syndrome etc.

Disclosure, Page 77-79; 102pp; English

The present sequence encodes Streptococcus pyogenes Streptococcal toxin A (SPE-A), from which a non-lethal mutant SPE-A, comprising at least 1 amino acid change; can be derived. The mutant SPE-A can be used to produce vaccines to protect animals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPE-A causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antibotic therapy. The mutant SPE-A is especially useful for treating T cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPE-A can be selectively toxic to T cell lymphoma cells

The novel mutant Streptococcal SPE-A toxin has at least 1 as change and is non-lethal compared with a protein to wild type SPE-A toxins are nontoxic and can produce antibodies that neutralise wild type SPE-A toxin activity. The toxins can be used in vaccines and therapeutics to generate a protective immune response against streptococcal infection. They can be used to protect against the development of streptococcal toxic shock syndrome (STSS). In addition, the toxins can be used for treating animals with symptoms of streptococcal infection or STSS and in methods for stimulating T cell proliferation and in the treatment of cancer. In particular they can be used for treating T cell lymphomas, and ovarian and uterine cancer 61 TCTATCCTTGAAACAGGTGCAACATAGATTTAGGGGGATTTACCAGACAACTATGA 120 9 9 New mutant Streptococcal SPE-A toxins - useful for, e.g. prevention or treatment of streptococcal infection or toxic shock syndrome. The sequences given in AAT28539-40 represent probes which were used in the method of the invention for the detection of S. pyogenes in a sample. The method comprises using probes and/or amplification primers which are pecific, ubiquitous and sensitive for determining the presence and/or amount of nucleic acids from selected bacterial species in any sample, where the bacterial nucleic acid comprises a selected target region or where the bacterial nucleic acid comprises a selected target region or hybridisable with the probes or primers. The method comprises contacting the sample with the probes or primers and detecting the presence and/or amount of hybridised primers or amplification products as and indication of the presence and/or amount of the bacterial species. This method may be used to detect commonly encountered bacterial species. This method may be used to detect commonly encountered bacterial species are didication may be used to detect commonly encountered bacterial species are didicated may be sureabled. Streptococcus pneumoniae, Staphylococcus aureus, Staphylococcus spidentials, Enterococcus facecalis, Staphylococcus spidentials, Enterococcus facecalis, Staphylococcus and the approx. 90% of urinary tract infections and with a high percentage of other severe infections including septicaemia, menicatis, pneumonia, tract infections. The method may also be used to evaluate a bacterial correstral.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                    Method for the detection of bacterial species using probes and primers -
allows detection and quantification of antibiotic resistant bacteria in
patients, the environment and food.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  eerrrirircririrgricrierricareachtaccaraacriricrararrarreacaacraa

```

The invention relates to detecting target bacterial species suspected to be present in a sample, comprising contacting nucleic acids of target be bacterial species with an amplification primer pair derived from a contacting bacterial species with an applification primer pair derived from a contaction of bacterial species but ubiquitous for different strains, amplifying the contact acid and detecting the presence or amount of an amplifying the contact and detecting the presence or amount of the target bacterial species. The invention includes primers and probes (ABA76662-CC ABA7684) against the target bacterial species, espeially E.coli, CK.pneumoniae, P.aeruginosa, P.mirabhils, S.pneumoniae, S.aureus, CK.pneumoniae, P.aeruginosa, P.mirabhils, S.pneumoniae, S.aureus, CK.pneumoniae, D.aeruginosa, P.mirabhils, S.pneumoniae, S.aureus, CK.pneumoniae, D.aeruginosa, P.mirabhils, S.pneumoniae, S.aureus, CK.pneumoniae, S.aureus, CK.pneumoniae, S.aureus, CK.pneumoniae, S.aureus, CK.pneumoniae, S.aureus, CK.pneumoniae, D.aeruginosa, AATTCTTTTATTAATGTAAAACCGCTCATTTGATGAGCGGTTTTGTCTTATCTAAAGGA Claim 6; Page 107-108; 168pp; English.                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the DNA encoding Streptococcal pyrogenic exotoxin A (SPE-A), a bacterial superantigen toxin (SAg), used for the formulation of SPE-A vaccine SPEA42. The coding region of this SAg toxin is altered by site directed mutagenesis, introducing LA2R mutation, that results in disruption of binding of the toxin to both the WHC class II or T-cell antigen receptor. SPE-A has antibacterial and cytostatic activity. This sequence is useful for the production of SPE-A vaccines and specific antibodies. This vaccine overcomes the disadvantages of the chemically inactivated toxoids and is designed to protect individuals against one or several related staphylococcal and streptococcal toxins. It is used for the diagnosis and treatment or amelioration of superantigen-associated bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              254

disrupt contact between the toxin and the HLA-DR receptor, reducing DR1 binding. SPEA42 can be expressed as a recombinant protein in Escherichia coli as a secreted protein or as a cytoplasmic product. No indicators of toxicity have been detected for the purified recombinant protein, and vaccine studies demonstrate that SPEA42 is highly antigenic, inducing protective immunity in a mouse animal model. The attended superantigen can be used to protect against superantigen toxin infections. Methods of producing and using altered superantigen toxins as vaccines, and in diagnosis and therapy, are provided by the invention. A multivalent vaccine consisting of altered superantigen toxins from SEA, SEB, SEC-1, TSST-1 and SPEA is predicted to provide protective immunity against the majority of bacterial superantigen toxins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AATAAAATTATTAATAAGTTAATGTTTTTTAAAAATATACAATTTTATATACTATTTATA

New superantigen toxin and/or DNA fragment with an altered binding of the encoded altered toxin to either MHC class II or T cell antigen receptor, useful for treating or ameliorating superantigen-associated bacterial CAACTAGATTGACAACTAATTCTCAACAAACGTTAATTTAACAACATTCAAGTAACTCCC 254 The invention relates to an isolated and purified superantigen toxin and/or DNA fragment, which has been aleared so that the binding of the encoded toxin to either major histocompatibility complex (MHC) class II or T cell antigen receptor is altered. The superantigen toxins, DNA fragments, and vaccines are useful for treating or ameliorating particularly useful for producing vaccine against superantigen are particularly useful for producing vaccine against superantigen toxin infections. The transformed host cells are useful for analyzing the effections of drugs and agents that affect the binding of superantigens to MHC class II or T-cell antigen receptors. The present sequence represents DNA encoding streptococcal pyrogenic exotoxin A <u> agerecaacaradarrageccaregagarrraccagacaactrareaacerarararacreac</u> TCATGITIGACAGCITATCATCGATAAGCTTACTTITCGAATCAGGTCTATCATGAAAC AGGTGCAACATAGATTAGGGCATGGAGATTTACCAGACAACTATGAACGTATATACTAC Pyrogenic exotoxin A; ds; superantigen-associated bacterial infection; superantigen toxin; gene; vaccine. composition ď superantigen toxin DNA fragment, useful for preparing treating or preventing bacterial infection.

4; Page 128-129; 141pp; English

The invention provides a superantigen toxin DNA fragment which has been genetically altered such that binding of the encoded altered toxin to either the MHC class II or T cell antigen receptor is disrupted or altered. DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyogenes pyrogenic exotoxin A (SpeA) DNA. This sequence is used in the invention

```
The invention relates to an isolated and purified superantigen toxin DNA fragment is altered so that binding of the encoded altered toxin to either the MHC class II or T cell antigen receptor is altered. Also included are a recombinant DNA construct (comprising a vector and an isolated and purified altered superantigen toxin DNA fragment), a host cell transformed with the recombinant DNA construct, producing altered superantigen toxin, an altered TSST-1 (toxic shock syndrome toxin) superantigen toxin peptide, diagnosing superantigen-associated bacterial infection, an autisent of ammunogenic response resulting in the protection of a mammal against superantigen-associated bacterial infection, or producing antigens toxin for associated bacterial infection, an artiser isolated from individuals immunised with one or more altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 Superantigen toxin and a mathody which recognises altered TSST-1 Superantigen toxin DNA fragment is useful for preparing a composition for treating or preventing bacterial infection. Ferman DS;

WPI; 2003-361759/34. P-PSDB; ABU79074 A mammalian cell receptor, useful in the treatment of cancer by binding to tumor associated lipids where the binding induces anergy or apoptosis in T cells and antigen presenting cells.

Disclosure; Page; 167pp; English.

The invention relates to a manmalian cell receptor, useful in the treatment of cancer, which binds to tunour sascoiated lipids and induces an array or apoptosis in the T cells and antigen presenting cells (APCS).

Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally descrivated, producing (MI) a tumourididal immuncyte population in vivo in a manmal (My althuring tumour associated lipids, ceramides, glycolphids, producing (MI) a tumourididal immuncyte population in vivo in a manmal (My althuring tumour associated lipids, ceramides, glycolphids, sphingolpids, glycosphigglipids, phosphosphipids are lactivated or slaylated glycash, lipopopids and precedylycolphids are lactivated or superantigen (SAS) mucleotide inserted into avivus, a mammalian T cell activation by tumour associated lipid are interesting the treatment of cancer (where an adaptor procein which inhibit treatment of cancer (comprising a lipid are inactivated or superantigen), producing (MI) a tumouricidal immuncyte population useful in the treatment of cancer (comprising a lipid are inactivated or produce a tumouricidal immuncyte population, and adminisering phy and adminisering phy and adminisering a tumouricidally are inactivated or produce a tumouricidal immuncytes population, and adminisering the tumouricidal immuncytes to the host), producing a tumouricidal population, and adminisering the tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produce a tumouricidally activated or produ

The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parastical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, bacteria, fungal and parastics. For universal detection and for specific and ubiquitous parastical species genus, family and group. A mucleic acid (I) obtained using the method of the invention of an algal, archaeal, bacterial, fungal and using the method of the invention can be used for the universal detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, backing or propertice and problem and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and problems and p

The invention relates to an isolated and purified superantigen toxin DNA fragment is altered so that binding of the encoded altered toxin to either the MHZ class II or T cell antigen receptor is altered. Also included are a recombinant DNA construct (comprising a vector and an isolated and purified altered superantigen toxin DNA fragment), a host cell transformed with the recombinant DNA construct, producing altered superantigen toxin, an altered TST-1 (toxic shock syndrome toxin) superantigen toxin peptide, diagnosing superantigen-associated bacterial infection, an infection, a vaccine (comprising an altered superantigen toxin for producing antigenic and immunogenic response resulting in the protection of a mammal against superantigen-associated bacterial infection, an arting/ameliorating a superantigen-associated bacterial infection, an enting/ameliorating a superantigen-associated bacterial infection, an antibacted from individuals immunised with one or more altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1. Also disclosed are mutated staphylococcal enterotoxin A, B, C1 (SEA, SEB). The superantigen toxin DNA fragment is useful for preparing a composition for treating a preventing bacterial infection. The present sequence encodes the SPEB L42R/SPEB C47S mutant fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1037

                                                                                                                                                                        The invention provides a superantigen toxin DNA fragment which has been genetically altered such that binding of the encoded altered toxin to either the MHC class II or I call antigen receptor is disrupted or altered. DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyrogenes pyrogenic exotoxin A (SpeA)-SpeB fusion DNA. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GGAGGGGTAACAATCGTGAAGGGAATCATTTAGAAATTCCTAAAAAGATAGTCGTCAAA

The invention relates to a mammalian cell receptor, useful in the anerghent of cancer, which binds to tumour associated lipids and induces anergy or apoptosis in the T cells and artigate presenting cells (ARCS).

Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally deactivated, producing (MI) a tumour associated lipids to contact immunocytes in which receptors for immunosuppressive fatty acids, ceramides, glycolpids, glycosphingolipids, phosphosphingolipids, gangliosides, sialylated glycans, lipopeptides and proteoglycolpids are inactivated or deleted), a construct useful in the treatment of cancer comprising a superantigen (SAG) nucleotide inserted into a virus, a mammalian T cell useful in the treatment of cancer (where an adaptor protein which useful in the treatment of cancer (where an adaptor protein which intibutes T cell activation by tumour associated antigens is deleted or functionally deactivated), a composition useful in the treatment of cancer (where an adaptor protein which the treatment of superantigen) producing a lipid raft conjugated to a superantigen) producing a tumour icidal immunocyte population ex vivo in a mammal (by allowing tumour associated lipids to contact humour associated lipids to contact humour associated lipids to population ex vivo in a mammal (by allowing a tumour associated lipids contact Affactivated or deleted to produce a cumouricidal immunocyte population a tumour associated lipids contact Affactivated or deleted to produce a contact Affact in which receptors for the tumour associated lipids contact Affact in which receptors a tumouricidally activated population, and administering the tumour deleted to produce a inactivated or deleted to produce a tumouricidally activated population, and administering a tumour cidal in the lipids are inactivated a tumouricidal in the lipids are inactivated a tumour associated lipids are inactivated 
Superantigen, ds; gene; SAg; staphylococcal enterotoxin; tumour; cancer; apoptosis; gene therapy; mammalian cell receptor; cytostatic; tumour associated lipid; anergy; T cell; antigen presenting cell; APC; tumouricidal immunocyte; antitumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A mammalian cell receptor, useful in the treatment of cancer by binding to tumor associated lipids where the binding induces anergy or apoptosis in T cells and antigen presenting cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Staphylococcus/Streptococcus erythrogenic toxin gene.
                                                                                                                                                                                                                                                                                                                                                                                                        ACA64721 standard; DNA; 1497 BP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 2; Page; 167pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30-MAY-2001; 2001JUS-00870759

contact T calls, in which adaptor proteins, which inhibit T cell activation by tumour associated antigans, are deleted or functionally deactivated to produce a tumouricidal population of T cells, and adaptor produce a tumouricidal population of T cells, and adactivated to produce a tumouricidally activated T cells to the host, or allowing a superantigen-lipid raft to contact T cells ex vivo, and administering the tumouricidally administering a lipid binding molecule which binds immunosuppressive tumour associated lipids in vivo), producing (M6) a tumour associated antigen to contact immunocytes in which adaptor. The tumour associated antigens to contact immunocytes in which adaptor control manual computed antigens are deleted or functionally deactivated) and producing (M7) a tumouricidal T cell population ex vivo in a mammal comprising allowing a tumouricidal T cell population ex vivo in a mammal comprising allowing a composition series immunocytes in vivo. The receptors, methods and compositions are useful for treating cancers and tumours. Bacterial superantigens are co-administered or administered as funding an ensure and compositions are useful for treating cancers and timorporated into a fusion construct with a superantigen. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format from the US patnet coffice website at "seqdata.uspto.gov/sequence.html?DocID=20020177551" 1387 1327 1209 AAGCTTACTTTTCGAATCAGGTCTTATCCTTGAAACAGGTGCAACATAGATTAGGGCATGG 1268 1388 ACAAACGTTAATTTAACAACATTCAAGTAACTCCCACCAGCTCCATCAATGCTTACCGTA 1447 160 TIGGAACTAAATTCAATCAATTIGTTACTAACAAGCAACTAGATTGACAACTAATTCTCA 219 159 S Superantigen toxin; SAg; Staphylococcal enterotoxin B; SEB; cytostatic; antibacterial; vaccine; MHC class II receptor; T-cell antigen receptor; antibody; toxoid; staphylococcal/streptococcal toxin; diagnosis; treatment; superantigen-associated bacterial infection; ds. population ex vivo in a mammal) by allowing a tumour associated lipids 100 AGATTTACCAGACAACTATGAACGTATATACTCACATCACGCAATCGGCAATTGATGACA 1328 TIGGAACTAAAITCAAICAATTIGITACTAACAAGCAACTAGAITGACAACTAAITCICA 220 ACAAACGITAAITTAACAACAITCAAGIAACITCCCACCAGCITCCAICAAIGCITACCGIA 40 AAGCTTACTTTTCGAATCAGGTCTATCCTTGAAACAGGTGCAACATAGATTAGGGCATGG 280 AGTAATCATAACTTACTAAAACCTTGTTACATCAAGGTTTTTTTCTTTTTG 329 15.0%; Score 278; DB 7; Length 1497; larity 99.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the DNA encoding Staphylococcal enterotoxin B (SEB), a bacterial superantigen toxin (SAG). The coding region of the SAG toxin when altered by site directed mutagenesis, results in disruption of binding of the toxin to both the MHC class II or T-cell antigen receptor. SEB has antibacterial and cytostatic activity. This sequence is useful for the production of SEB vaccines and specific antibodies. This vaccine overcomes the disadvantages of the chemically inactivated toxoids and is staphylococcal and streptococcal toxins. It is used for the diagnosis and treatment or amelioration of superantigen—associated bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAAATATATATTTTTTATGAGGGTGACCCTGTTACTCACGAGAATGTGAAATCTGTTG 1032
